50X1-HUM

PREGNANCY AND BIRTH PROCEDURES

1. [redacted] I reported to the Pregnancy Consultation Dispensary No. 17 [see Item No. 7 of Enclosure (A)] to receive medical assistance during my pregnancy period. It was necessary to report here, not only to arrange for medical care and to assure reception in a maternity hospital at time of birth, but also to obtain authority to procure extra food rations, particularly milk, sugar and fat. This authority to procure extra rations had to be obtained at the dispensary and was valid for only a four-week period. For this reason an expectant mother had to return regularly every four weeks to assure a continuing authorization for extra rations. (No milk was available at the time, even though an extra ration authorization was issued.) 50X1-HUM
2. The dispensary conducted a physical examination of the expectant mother as described on a pregnancy card issued to every mother reporting to the dispensary [see Item No. 7 of Enclosure (A)]. The dispensary placed great stress on the examination of blood for venereal disease and the physicians appeared very frightened of the possibility of any mother having an infectious disease. As stated on the pregnancy card, this card was retained by the pregnant mother, and presented to the maternity hospital, midwife or physician at the time when the child was to be delivered.

3. When my baby was about to born, civil transportation was summoned for me. Leningrad maintained an ambulance service (known as Rapid Assistance Service) to render first-aid assistance in emergencies to any section of the city. The ambulance which came to pick me up was attached to the Lenin Rayon section of Leningrad and was therefore obliged to bring me to a Maternity Hospital in that Rayon. I do not recall the exact location of this hospital except that it was near the Baltic Railroad Station. I had no choice in the selection of the hospital at that time. Soviet citizens in Leningrad who were expectant mothers usually summoned an ambulance if one was available, or reported directly to a maternity hospital.
4. In order to enter the hospital I had to present my Maternity Clinic Card [see Item No. 7 of Enclosure (A)], which showed that I was free of venereal disease. Six or seven physicians were on duty at the Lenin Rayon Maternity Hospital on my arrival. In addition, the hospital had one midwife to every two beds in the wards. At the time of birth many of these physicians and midwives gathered around my bed; it is possible that some of them were students. No drugs were given to me for the relief of birth pains, nor did I receive any pain-relieving drugs after the birth, to my knowledge. [See Item No. 7, page 3 of Enclosure (A), which contains the substance of the history of Johann Cristoph's birth.] I was required to remain in the hospital for eight to ten days after the birth, before returning home. This was normal procedure for Soviet civilians. I occupied a bed in a room with eleven other beds. This ward was not pleasant and only superficially clean.
5. At this Maternity Hospital I was presented with a certification that I had given birth to a baby [see Item No. 1 of Enclosure (A)]. Normally Soviet parents presented this certification to the ZAGS (a municipal office for registration of vital statistics). Upon presentation of the certificate at ZAGS, the parents would receive an official birth certificate, and the facts about the birth would be entered in the city records. We did not present our certification to ZAGS because we feared that our child would be registered as a Soviet citizen, and this registration might prevent us from bringing the child back to our homeland. We therefore did nothing more with the certification issued by the Maternity Hospital. My husband advised his superiors at the Institute in which he worked of the baby's birth, and he was issued food ration cards for the baby without any need for presentation of a birth certificate.
6. Soviet physicians recommended that the Soviet mothers breast-feed their babies for as long as two years after birth. I was advised to breast-feed my baby also, but because of my scanty milk production this nursing period lasted only a few months. The baby began to receive fruit juices two months after birth, and later some vegetables.
7. The same general procedure was followed for my pregnancy with Beate. However, I reported to the Pregnancy Consultation Clinic No. 17 only about four weeks before Beate's birth and was given a new pregnancy card [see Item No. 8]. Furthermore, prior to the birth I had been advised by a Soviet woman interpreter of the existence of a better-than-average maternity hospital known as the Prof. Snegerev Maternity Hospital located near the Moscow Railroad Station [see Items Nos. 2 and 8]. I decided to have my child there and just before the baby was born, I went to the hospital in a private taxi. I had advised the hospital authorities by telephone of my plans [see Item No. 8 for details of the birth]. Although I received no pain-relieving drugs prior to birth, I was given tablets for the relief of pains after the child was born.

8. The latter maternity hospital was very clean. The wards had ten or twelve beds each. This birth was also attended by many physicians, students and midwives. No visitors were allowed to come in the wards but food packages could be sent in. The food was not bad, but butter and sugar were scarce and these were always most welcome when sent from the outside. The hospital had no cotton for absorption of bleeding from the genital area during the post-natal period. However, this cotton could be purchased in the city drugstores and was sent to the mothers from outside. The hospital routinely searched all packages sent to mothers. I believe this was done to make certain that no harmful food items reached the mothers, and I did not know that anything was confiscated from the packages.
9. The German women who became pregnant after 1950 were able to have their babies at a maternity hospital located opposite the apartment houses where the German community was installed in a park-like area called, in Russian, Victory Park. This was said to be quite modern and clean. Blood transfusions were administered there to mothers requiring such therapy after delivery.

18. This committee also recommended that I be given sanatorium treatment. Usually, in the case of Soviet citizens who obtained the committee's recommendation, prompt assignment to a sanatorium took place. However, in my case approval of the Institute at which my husband worked was required. This approval was withheld, I believe, because I was a foreigner, and I could not go to a sanatorium. Refusal was also given to a suggestion that I spend a vacation at a Baltic Sea resort.

## Instructions for Pregnant Women

1. Pass through pregnancy under observation of consultation physician.
2. Wear comfortable clothing and shoes - a) do not bind abdomen;  
b) at start of second half of pregnancy support abdomen with wide belt or bandage; c) support breasts with special brassiere;  
d) do not wear garters.
3. Avoid meat consumption and sharp and salted food. A diet of milk and fruit and occasional meat dishes is suggested.
4. Under no circumstances take alcoholic beverages.
5. Ensure a regular, daily, bowel movement; use laxatives only on physician's recommendation. Regular urinalyses are necessary after second half of pregnancy.
6. Care for teeth and keep mouth clean.
7. Especially guard cleanliness of skin. Baths are required at least twice a week.
8. After 32nd week wash nipples daily with cool boric acid solution.
9. Use Esmark container for daily rinsing of external genitalia with boiled soapy water. In case of white discharge ("whites"), consultation with physician is necessary.
10. Persuade husband to refrain from sexual intercourse if possible. Sexual intercourse in last months of pregnancy is definitely harmful.
11. Avoid hard physical work, especially in last eight weeks; light work and walks are beneficial.
12. It is obligatory that birth take place at a Birth Assistance Institution which should be notified in advance.
